Sommermeier, K. and Philipp, K.
THE SIGNIFICANCE AND CALCULATION OF PRIMARY IONIZATIONS IN THEORY. [1960] 12p.
16 refs.

Order from SLA m\$2. 40, ph\$3. 30 61-10565

Trans. of Zeitschrift für Naturforschung (West Germany) 1959, v. 14b [no. 1] p. 33-37.

In practical agreement with the older literature, Pollard and co-workers accepted the 110 ev as the mean expenditure of energy per primary ionization in biological matter. According to experimental investigations on primary ionization in vapors containing hydrogen it must be assumed that in biological matter the mean expenditure of energy per primary ionization is at least 30% less than 110 ev. However, very probably the low energy primary ionizations (taking place individually in biological structures) have only an insignificantly small activity probability. (Author)
